

estos

enables easy communication

With the native **ProCall for macOS**, small and medium-sized companies can profit from the tried-and-tested features of the Unified Communications best-seller ProCall Enterprise and improve their cooperation.

ProCall Enterprise

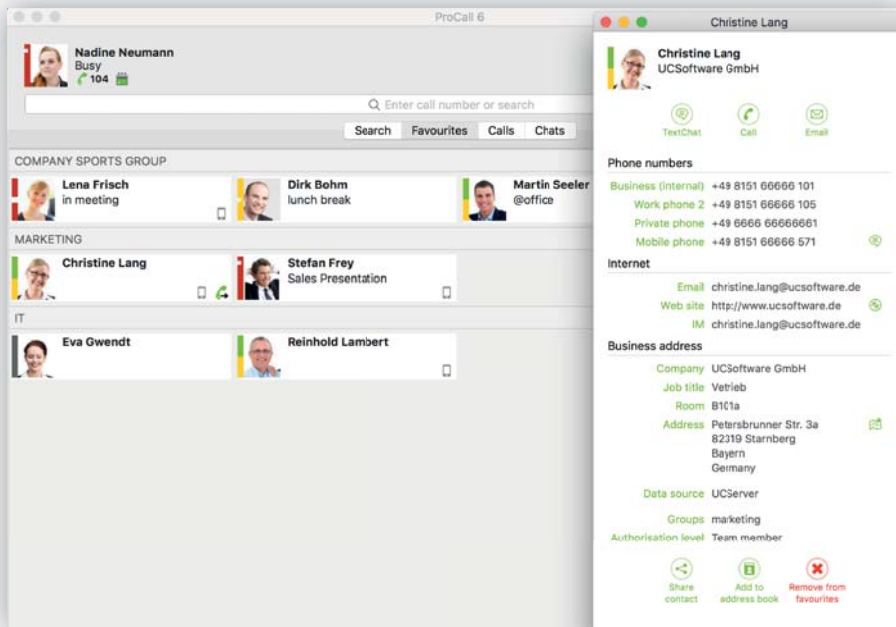

Native Client for macOS

[estos.com](https://www.estos.com)

Communicate and Collaborate Better.

The client supports the following Apple operating systems:

- macOS 10.12 „Sierra“
- macOS 10.13 „High Sierra“

There are various filters available (day, week, month and caller), which means that calls can be tracked and processed conveniently.

Internal and external contacts are organized in Favorites. Federation allows the secure exchange of presence information and instant messages (chat), including beyond the company's four walls.

The application is optimized for Microsoft Outlook:mac 2011, including the local macOS address book and other data sources such as CRM, ERP or goods management systems.

The native client for macOS from ProCall Enterprise includes functions such as hotkey dialing, reverse search and a call log, instant messaging (chat) and presence management for Mac workstations in the company.

Support for multiple telephone lines means that extensions (desk phone, DECT) can be integrated. The control of call forwarding or call barring is also available with just a click. Active and missed calls are archived in the personal (call) log.

LDAP contacts or the Microsoft Active Directory can be linked via the MetaDirectory. This allows efficient searching in all contact data sources directly from ProCall for macOS.

ProCall Enterprise clients with existing licenses are also optionally able to use these for ProCall for macOS.
