# ProCall One R2

Office Productivity Software for Individual Workstations

## Communicate efficiently and simplify business processes.

The product has been designed for Windows PC with functions such as Computer Telephony Integration (CTI), Smartphone Integration via Bluetooth, contact data searches and management, call log and call planning and integration of web applications (e.g. MS CRM).

ProCall One R2 is a single workstation CTI solution (1st party) offering all key basic and comfort telephone functions such as dialing, pick-up, hang-up, enquiry, toggling and call forwarding. When calls come in, all available contact details are compared with the incoming calling number and the matching contact information is displayed.

ProCall One R2 is designed and optimized for integration with Microsoft Outlook and IBM Notes. For backwards searches, contact data can be integrated via ODBC and LDAP as well as telephone book CDs such as the German Telefonbuch and twixtel. The optionally available estos MetaDirectory extends the possibilities for integrating contact details even further.
